Meta-analysis of organizational skills interventions for children and adolescents with Attention-Deficit/Hyperactivity Disorder

Cognitive computer training in children with attention deficit hyperactivity disorder (ADHD) versus no intervention: Study protocol for a randomized controlled trial

# Aida Bikic

Effects of screens | Associate professor | PhD | Keynote Speaker  
Danmark

## Resumé

My research is focused on the effects of screen time on children's cognition and emotion regulation and the role of parenting. I'm investigating possible negative and positive effects of screen time both in typically developing children and children with ADHD.

In my Ph.D. I have explored positive effects of computer games on cognitive functions in children with ADHD. I'm also investigating non-pharmacological treatments for children and youth with ADHD.

Additionally I'm focusing on the effects of family interventions in child psychiatry. Currently I'm the Principal Investigator of two randomized controlled trials testing the effects of parent training for children with ADHD and a transdiagnostic attachment based parent training.
